Training courses and seminars at premium level – with focus on practicability in your daily work

Our highly qualified training team offers a comprehensive seminar program from theory classes up to practical workshop seminars of several days. Our instructors are certified orthopaedic technicians with long-term practical experience and will be happy to share with you their extensive professional knowledge in the entire field of orthopaedic technology and orthopaedic shoe technology.

In our training area of approx. 1.500 sqm, we offer a wide range of seminars for professional orthopaedic technicians and orthopaedic shoe technicians as well as physio-therapists. Topics cover plastics- and pre-preg processing, prosthetic manufacturing as well as orthotic and brace care. Moreover, we offer seminars about silicone processing, motion analysis and diabetic foot syndrome.

Besides classical subjects of orthopaedic technology, our seminars also contain new trends and current developments of the orthopaedic industry. An auditorium with 160 seats as well as a fully equipped workshop with 15 works stations, machine room, gait lab, patient fitting room and plaster casting room provide best conditions for advanced qualified professional education.

Use this opportunity and bring your own patients or your own models to the seminar!

Construct your own seminar package!

Whether it is one seminar day with two different topics; three trainings within three months; or a full load of professional knowledge in one week – we will be pleased to develop with you your customised seminar package. Depending on the target group, we can offer each seminar for all levels from beginners' to professional level.

Choose the seminar language – German, English, Spanish or Russian. If you wish, we also will come to your workshop to teach your staff in your own place. The minimum number of participants per seminar is 3 persons.

Modern and fully equipped – our seminar rooms

Audimax

The Audimax includes 160 seats and is equipped with appropriate seminar- and teaching material.

Training Workshop

Our training workshop equipment meets the latest technical standards. Besides ten resin- lamination workstations with three different suction devices, cutting table and silicone roller, the training workshop provides all commonly known ovens.

Machine Park

The machine park contains a large selection of machines made in Germany by Maschinen-Schmid. The room has been equipped according to latest technical standard and includes a fully automatic suction device, to which all machines are connected.

Plaster Casting Room

The plaster cast room provides eight work spaces for casting and modelling of plaster molds.

Gait Analysis

The modern gait lab is equipped with all necessary tools to perform professional motion analyses in 2D and 3D; among others six cameras to record motion sequences, a tread mill with reverse mode and variable slope adjustment as well as an impact measuring plate to record forces and to calculate torque characteristics at the joints.
