

## More performance, less wear: Modern abrasive sleeves

l. t. r.: Abrasive fleece (161P97), abrasive sleeves with ceramic grit (161P96, 161P94, 161P95, 161P93)

### Abrasive sleeves with ceramic grit (161P93, 161P94, 161P95, 161P96)

Abrasive sleeves with ceramic grain offer decisive advantages over conventional products and are therefore the best choice for daily work in the workshop. The grinding performance of a sleeve with ceramic grit is increased by up to 300%, the results are excellent and wear is low.

Added to this is optimum heat dissipation, which prevents sticking when working with plastic.

#### Characteristics

- perfect sanding results
- long-lasting due to low wear
- better heat dissipation, therefore no sticking with plastic
- low grinding temperature due to active ingredient coating
- packaging unit: 5 pieces

### Abrasive fleece (161P97)

Thanks to its open structure, the new abrasive fleece optimally absorbs dirt particles. The sleeve is perfect for grinding upholstery materials and soft plastics at the edges.

#### Characteristics

- for individual use
- no surface changes due to abrasive grains
- open structure eases absorption of dirt particles
- packaging unit: 1 piece
